

ISG-N127...

Features

- Amplifier with modulated infrared light
- Range up to 55 m (181 ft)
- Automatically check of the sensor heads
- Sensitivity adjustable with potentiometer
- Switching mode light/dark switchable
- Basic transmit power 20% / 100% switchable
- 4 different selectable transmit frequencies
- Transistor output (npn/pnp)
- Alarm output
- Transmitter and receiver connections are short-circuit proof
- 11-pin DIN rail mounting socket for simple installation

Ordering Table

Supply voltage	Order code
230 V AC	ISG-N127/230VAC
115 V AC	ISG-N127/115VAC
24 V AC	ISG-N127/24VAC
24 V DC	ISG-N127/24VDC

Accessories	Order code
11-pin DIN mounting socket	ISO1
Protective enclosure	PanBox 1x1
Retaining clip	RTC11

Safety Instructions

Warning!

The infrared light barriers ISG-... are not safety systems and should not be used as such systems. The devices are not to be used for applications, where personal safety is dependent on their function.

Short Description

This 1-channel photo-electric amplifier is a processor controlled amplifier with an integrated analysis and sensor head control unit. The photoelectric amplifier works with modulated infrared light, which enables a high degree of immunity to ambient light and cross talk from neighbouring photo-sensors. The manual gain setting, adjusted with a potentiometer located on the front side, enables the user to simplify the installation and work.

According to the application the amplifier can be switched to the different working conditions by DIP-switches. Thus, the user can switch to different basic transmit levels, which selected according to the range and the pollution level, to increase the fine adjustment of the sensitivity. Thus, the object recognition can be optimize.

For the error detection at the sensor heads there is a permanent active sensor control unit. This unit shows the user, if an error is at the transmitter or at the receiver.

An alarm display and output, which shows errors and the limit of the transmit power and is connectable with a PLC, enables users to safely work with the photoelectric amplifier.

Infrared transmitters and receivers in different, compact and robust designs are described in the sensor heads datasheet.

Device Overview

Displays and operating elements

- H1 – Output status indicator (yellow)
- H2 – Sensitivity indicator (green)
- H3 – Alarm display (red)
- H4 – Transmitter error display (red)
- H5 – Receiver error display (red)
- H6 – Power ON display (green)
- P3 – Gain setting

DIP-switch	1	2	3	4		
	System power		Switching mode		Transmit frequency	
	20 %	ON	dark	ON	3,0 kHz	ON ON
					3,3 kHz	OFF ON
	100 %	OFF	light	OFF	3,7 kHz	ON OFF
					4,0 kHz	OFF OFF

Factory setting is marked in dark grey

Caution!

The AC-supply devices are isolated from main.
A grounded connection on the low voltage side is required (PIN 7).
